Open Access

Open access is free, immediate, permanent, full-text, online access, for any user to digital scientific and scholarly material, primarily research articles published in peer reviewed journals.

Open Access means that any user, anywhere, who has access to the Internet, may link, read, download, store, print-off, use, and data-mine the digital content of that article.

An Open Access publication usually has limited copyright and licensing restrictions.

21 tot 30 van 7773:

- 21. Intertwining uncertainty analysis and decision-making about drinking water infrastructure**
2007-10-29 Meijer, H.M.;
Infrastructures, generally designed to have a long service life, are particularly vulnerable to long term changes in their functioning. Therefore it is important that uncertainties are taken into account as much as possible from the beginning of the process of infrastructures. This thesis focuses on drinking water infrastructure.

- 22. Experimental and numerical stability investigations on natural circulation boiling water reactors**
2007-10-29 Marcel, C.P.;
The stability of natural circulation boiling water reactors is investigated with a strong emphasis on experiments used for such a task: the GENESIS facility (to which a void reactivity feedback system is artificially added) and in addition, numerical codes are also used in the simulation.
